

# The ssh command

## Troubleshooting

If the ssh command didn't work with you or you received an error message, you can enter the following commands to solve the problem:

```
sudo apt-get purge openssh-server
```

```
sudo apt-get install openssh-server
```

Then try connecting to localhost using the ssh command:

```
ssh remote_username@localhost
```

or

```
ssh remote_username@ipaddress
```

I hope this has been informative for you and I would like to thank you for viewing.
